GLASS THAT GLOWS

You've never seen anything quite like this before: Veluna is luminescent glass that radiates a gentle glow once a room is dark. With just 20 minutes of exposure to fluorescent or natural light, Veluna will glow for more than an hour. The longer the exposure, the longer light will emanate from Veluna.

Available in photo luminescent panels or bricks, Veluna works repeatedly, each time it is renewed by its light source. Whether you're using it as a design element or as an emergency precaution to light high traffic areas in the event of a power outage, Veluna provides a unique solution to your architectural needs.

AVAILABLE IN TWO COLORS

Day

Night
